

LT1325

Slim robust LVDT Sensor (Free core)

(Linear Variable Differential Transformer)

The LT1325 sensors contains design features which make it suitable for applications where high temperature, severe vibration, high cycling and fluid contamination are important considerations.

The sensor is used in installations when size, performance and reliability are part of the design criteria and are used extensively in motorsport control systems for throttle and clutch actuation. Other applications include flight control and measurement systems.

The sensor housing is manufactured from stainless steel and is environmentally sealed and fitted with Raychem fire & chemical resistant, high temperature Viton-type55-26 signal cabling for total system reliability.

The LVDT sensor is designed to convert the linear movement of a separate non-contacting core into a proportional voltage output.

Other models in this range

- LT0600 - Micro-slim compact (6mmØ)
- LT0800 - Ultra-slim compact (8mmØ)
- LT0950 - 9.5mmØ choice of mounting
